

BITERITE
No more bored pigs

**- a healthy pen environment begins with pigs
that have something to do.**

Ikadan System A/S, well known for developing innovative solutions in plastic, has introduced a simple and effective product that occupies nursery and finishing piglets in bare pens. The result is reduced antisocial behaviour such as tail biting, fighting and ear sucking.

The product, called the »BiteRite«, so resembles a pig's own tail that the animals would rather bite it than the tails of their neighbours.

The pen environment is thus enhanced, as the attention of the pigs is captured by the

substitute that does not become dirty nor occupy floor space.

Research and investigations both internationally and by DS (the Federation of Danish Pig Producers and Slaughterhouses) have shown that if the pig's interest is to be maintained, enrichment materials must be workable and changeable. The elastic material and the special S-design are two of the elements that make the BiteRite so popular among pig producers who have tried it in their own pens.

More and more consumers demand better animal welfare and environment, as well as

quality meat from the pork producer, and the BiteRite can be a vital tool in addressing these demands. In some EU countries, future legislation will be aimed at enhancing the pen environment and here the BiteRite is one of the ways in which pen environment can indeed be improved.

This is an opportunity for pig producers to keep ahead of legislation, to optimise the pen environment, and to reduce tail biting and other destructive behaviour.

Contact Ikadan and see for yourself how well the BiteRite occupies your pigs.

BITERITE
No more bored pigs

The BiteRite is designed to be hung in the pen so that it does not become soiled. The holder takes four elastic plastic »chew sticks« which can be replaced when necessary.

Research has proved that the design of occupational material for animals is especially important. The special S-form makes the device more elastic and therefore more exciting for the pigs.

The BiteRite is supplied complete with hanging chain and is therefore easy to place and position according to pig size.

The BiteRite is very simple and therefore easy to install anywhere in pens; it occupies very little space.

BiteRite comes in two different versions - a red for weaners and a blue for finishers and sows.

IKADAN SYSTEM A/S MANUFACTURES SPECIALSOLUTIONS FOR INDUSTRY AND ANIMAL PRODUCERS AROUND THE WORLD. ONE OF THE PRODUCTS FOR WHICH WE ARE WELL KNOWN IS **IKADAN ULTRAFLEX SLATTED FLOORING** IN PLASTIC AND CAST IRON. THE **VIP FARROWING PEN** IS ANOTHER PRODUCT IN PLASTIC THAT ENSURES AN OPTIMUM PEN ENVIRONMENT.
