

ULTRAFLEX
slatted flooring for piglets

Innovative solutions for the future...

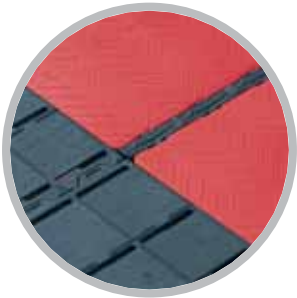

Combination possibilities and flexibility are built into the wide Ultraflex line of products. The plastic provides a warm and pleasant environment that also reduces the risk of injury to the piglets. Optimum manure fall-through is ensured by the correct size of aperture in Ultraflex modules and the triangular slat cross-section that prevents clogging. At the same time, the form and surface of the slats ensures easy and problem-free cleaning. We use only first-class raw materials; our aim being to achieve the greatest possible durability.
